Five to eight training programmes of one week are regularly conducted every year at Auroville. They approach theory with basics on soil characteristics, design, calculation, etc. and practice with block making, quality control, design guidelines, etc. All skills are welcome: engineers or architects, technicians or supervisors, masons or students and laymen.

Production of CSEB since 1990

Theoretical lectures on soil identification

Theoretical lectures cost analysis

Production of CSEB for a women self help group

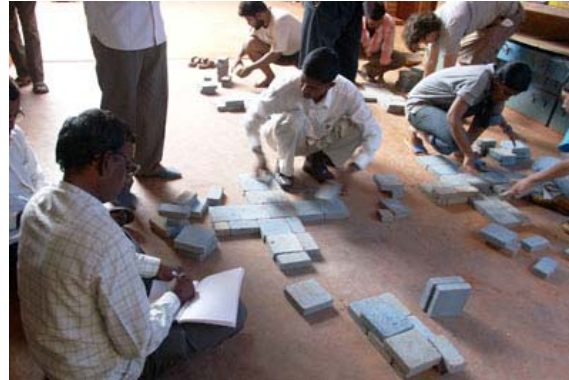

Production of CSEB for a women self help group

Adjustment and maintenance of the Auram Press 3000

Production of interlocking CSEB for earthquake resistance

Session on design guidelines with bond patterns

Session on quality control with the field block tester
