

Details for AVEI Training Courses

For AVD course: if you bring your laptop, you should have the software AutoCAD installed on it and you should know how to use it. Note that a laptop is not compulsory for the AVD course.

For CSEB course: you should bring with you one or more soil samples (1 Kg per sample is enough). They will be analyzed, free of cost, during the training course. Note that you should not take topsoil and that a good soil for CSEB is rather sandy. You should preferably take samples from locations where you can dig later on.

For Designing with CSEB course: it is compulsory to have a laptop with AutoCAD software installed.

For Bioclimatic Earth course: it is compulsory to have a laptop with AutoCAD software installed.
