TAKE THIS OPPORTUNITY TO LEARN HOW TO BUILD VAULTS AND DOMES

with sun dried compressed earth blocks

Do you want to know the characteristics of the blocks and to construct a dome or vault?

Come to our theoretical-practical course in San Miguel de Allende, Guanajuato, Mexico

MEXICAN VAULTS AND DOMES WORKSHOP

25 - 29 October, 2009

Featured Presenter: Arq. Ramón Aguirre, (UNAM – Posgraduate in light covers and roofs, UNAM)

Benefits:

- Study the historical and cultural importance of the vault, as architectural knowledge passed through generations.
 - Understand the convenience and beauty of this inexpensive technique
 - Realize the low environmental impact of this system Study and understand the structural value of the vault and dome
 - Participate in the construction of a vault done with compressed earth blocks
 - Construct your own vault in the future with this knowledge
-

How long is the workshop?

3 ½ DAYS

Our goal is to present all the information we can about the modern method of constructing vaults with compressed earth blocks. We require your participation for three and one half days to complete the course. You will leave with new understanding of this local and traditional method of economic construction combined with knowledge and experience with Stabilized Compressed Earth Blocks...the truly environmental building material.

HOW MUCH DOES IT COST?

\$3,500.00 PESOS or \$275.00 usd / PERSON

Includes:

- Lunches
- Manuals
- Construction equipment
